Volume 123 · Numbers 1 to 3 · 1995

RESEARCH ARTICLES

Blackwell BF, Sinclair JA
Evidence of secondary consumption of fish by double-crested cormorants 1–4

Shane SH
Relationship between pilot whales and Risso's dolphins at Santa Catalina Island, California, USA 5–11

Shaffer JA, Doty DC, Buckley RM, West JE
Crustacean community composition and trophic use of the drift vegetation habitat by juvenile splitnose rockfish *Sebastes diploproa* 13–21

Witting DA, Able KW
Predation by sevenspine bay shrimp *Crangon septemspinosa* on winter flounder *Pleuronectes americanus* during settlement: laboratory observations 23–31

Ohtsuka S, Inagaki H, Onbe T, Gushima K, Yoon YH
Direct observations of groups of mysids in shallow coastal waters of western Japan and southern Korea 33–44

Siegel V, Loeb V
Recruitment of Antarctic krill *Euphausia superba* and possible causes for its variability 45–56

Haury L, Fey C, Gal G, Hobday A, Genin A
Copepod carcasses in the ocean. I. Over seamounts 57–63

Genin A, Gal G, Haury L
Copepod carcasses in the ocean. II. Near coral reefs 65–71

Defeo O, de Alava A
Effects of human activities on long-term trends in sandy beach populations: the wedge clam *Donax hanleyanus* in Uruguay 73–82

Ray M, Stoner AW
Growth, survivorship, and habitat choice in a newly settled seagrass gastropod, *Strombus gigas* 83–94

Hagen NT
Recurrent destructive grazing of successionally immature kelp forests by green sea urchins in Vestfjorden, Northern Norway 95–106

Meador JP, Casillas E, Sloan CA, Varanasi U
Comparative bioaccumulation of polycyclic aromatic hydrocarbons from sediment by two infaunal invertebrates 107–124

Jollivet D, Desbruyères D, Ladrat C, Laubier L
Evidence for differences in the allozyme thermostability of deep-sea hydrothermal vent polychaetes (Alvinellidae): a possible selection by habitat 125–136

Lee RW, Childress JJ
Assimilation of inorganic nitrogen by seep mytilid Ia, an undescribed deep-sea mussel containing methanotrophic endosymbionts: fate of assimilated nitrogen and the relation between methane and nitrogen assimilation 137–148

Barthel D
Tissue composition of sponges from the Weddell Sea, Antarctica: not much meat on the bones 149–153

Harriott VJ, Banks SA
Recruitment of scleractinian corals in the Solitary Islands Marine Reserve, a high latitude coral-dominated community in Eastern Australia 155–161

Levin LA, DiBacco C
Influence of sediment transport on short-term recolonization by seamount infauna 163–175

Arnold TM, Tanner CE, Hatch WI
Phenotypic variation in polyphenolic content of the tropical brown alga *Lobophora variegata* as a function of nitrogen availability 177–183

Vidondo B, Duarte CM
Seasonal growth of *Codium bursa*, a slow-growing Mediterranean macroalga: *in situ* experimental evidence of nutrient limitation 185–191

Raven JA, Walker DI, Johnston AM, Handley LL, Kübler JE
Implications of ^{13}C natural abundance measurements for photosynthetic performance by marine macrophytes in their natural environment 193–205

Pinckney J, Paerl HW, Fitzpatrick M
Impacts of seasonality and nutrients on microbial mat community structure and function 207–216

Christian JR, Karl DM
Measuring bacterial ectoenzyme activities in marine waters using mercuric chloride as a preservative and a control 217–224

Delille D, Fiala M, Rosiers C
Seasonal changes in phytoplankton and bacterioplankton distribution at the ice-water interface in the Antarctic neritic area 225–233

Stefels J, Dijkhuizen L, Gieskes WWC
DMSP-lyase activity in a spring phytoplankton bloom off the Dutch coast, related to *Phaeocystis* sp. abundance 235–243

Lipschultz F
Nitrogen-specific uptake rates of marine phytoplankton isolated from natural populations of particles by flow cytometry 245–258

Brussaard CPD, Riegman R, Noordeloos AAM, Cadée GC, Witte H, Kop AJ, Nieuwland G, van Duyl FC, Bak RPM
Effects of grazing, sedimentation and phytoplankton cell lysis on the structure of a coastal pelagic food web 259–271

Garrabou J, Flos J
A simple diffusion-sedimentation model to explain planktonic gradients within a NW Mediterranean submarine cave 273–280

Kerner M, Edelkraut F
Decomposition of organic matter in aggregated seston from the Elbe estuary: redox dependency and production of low molecular weight DOC compounds 281–293

Thomsen L, Graf G, von Juterzenka K, Witte U
An *in situ* experiment to investigate the depletion of seston above an interface feeder field on the continental slope of the western Barents Sea 295–300

REVIEW

Abarzua S, Jakubowski S
Biotechnological investigation for the prevention of biofouling. I. Biological and biochemical principles for the prevention of biofouling 301–312

MARINE ECOLOGY PROGRESS SERIES

HISTORY: Marine Ecology Progress Series (MEPS) was established in response to requests from numerous marine ecologists from all over the world. When founded, MEPS was based on 'Marine Ecology' – the first comprehensive, integrated treatise on life in oceans and coastal waters – conceived, organized and edited by Professor Otto Kinne, and published by John Wiley & Sons.

AIM: MEPS serves as a world-wide forum for all aspects of marine ecology, fundamental and applied. The journal covers: microbiology, botany, zoology, ecosystem research, biological oceanography, ecological aspects of fisheries and aquaculture, pollution, environmental protection, conservation, resource management.
Ecological research has become of paramount importance for man's future. The information presented here should, therefore, encourage critical application of ecological knowledge for the benefit of mankind and, in fact, of life on earth. Marine Ecology Progress Series has received recognition as the leader in its field. The journal strives for

- complete coverage of the field of marine ecology
- the highest possible quality of scientific contributions
- quick publication
- a high technical standard of presentation.

SCOPE: MEPS is international and interdisciplinary. It presents rigorously refereed and carefully selected research articles, reviews and notes, as well as comments, concerned with:

Environmental Factors: Tolerances and responses of marine organisms (microorganisms, autotrophic plants, and animals) to variations in abiotic and biotic components of their environment; radioecology.

Physiological Mechanisms: Synthesis and transversion of organic material (mechanisms of auto- and heterotrophy); thermo-, ion-, osmo- and volume-regulation; stress resistance; non-genetic and genetic adaptation; population genetics; orientation in space and time; migrations; behavior; molecular basis of ecological processes.

Cultivation: Maintenance and rearing of, as well as experimentation with, marine organisms under environmental and nutritional conditions which are, to a considerable degree, controlled; analysis of the physiological and ecological potential of individuals, populations and species; determination of nutritional requirements; ecological aspects of aquaculture; water-quality management; culture technology.

Dynamics: Production, transformation, and decomposition of organic matter; flow patterns of energy and matter as these pass through organisms, populations and ecosystems; biodiversity; variability of ecosystem components; trophic interrelations; population dynamics; plankton ecology; benthos ecology; estuarine and coastal ecology; wadden-sea ecology; coral reef ecology; deep-sea ecology; open-ocean ecology; polar ecology; theoretical ecology; ecological methodology; ecological modelling and computer simulation.

Ocean Management: Human-caused impacts: their role as modifiers and deformers of living systems, their biological consequences and their management and control; inventory of living resources in coastal areas, estuaries and open oceans; ecological aspects of fisheries; pollution of marine areas and organisms; protection of life in the seas; management of populations, species and ecosystems; management of coastal zones and sea areas; biotechnology.

Scientific publications appearing in this journal have been rigorously refereed, carefully quality-improved, and professionally selected by our editorial staff. These publications, and all parts thereof, are protected by copyright. This covers the exclusive rights of the publisher to *reproduce* (by any means, including photographic or electronic), to *distribute* (including via photocopies, reprints, or electronic means), and to *store* on microfilm, in electronic data bases, on video disks, etc., this material. The acceptance regulations of a manuscript for publication automatically include the consent of the author(s) to transfer the copyright to the publisher. Permission for exceptions to these rules must be obtained in writing from the publisher at the time of manuscript submission.
In the USA, photocopies may be made for personal or in-house use beyond the limitations stipulated under Section 107 or 108 of U.S. Copyright Law, provided a fee (US $3.00 per article) is paid to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA.

Publisher, editors and authors do not accept legal responsibility for errors, omissions or claims, nor do they provide any warranty, express or implied, with respect to information published in MEPS.

Tables of contents and *tables of contents with abstracts* for MEPS are available free of charge on the Internet via World Wide Web (http://www.int-res.com/int-res).
